

Precision and Control in Vertebral Distraction

- Smooth, incremental hydraulic distraction
- Stronger holding power; accurate fixation
- Improved freedom of movement to operate

OrtoWell® is the **world's first hydraulically powered distractor system**, supporting greater freedom of movement when separating and fixating vertebrae during spine surgery.

CLINICAL CHALLENGE

Mechanical distractors rely on manual force and torque during one of the most critical stages of spine surgery: separating vertebrae to create access, visibility and stable surgical working space.

THE ORTOWELL® APPROACH

OrtoWell® Distractor System from OrtoWay replaces manual force with controlled hydraulic movement, helping surgeons achieve smooth distraction and firm, stable fixation throughout the procedure, with greater control and freedom of movement.

Key benefits for the surgical team

Controlled hydraulic distraction

Smooth incremental movement with precise adjustment.

Strong holding power

Designed to maintain distraction throughout the procedure.

Stable working space

Supports visibility, access and consistency during surgery.

Reduced manual force

Helps reduce repeated manual adjustments and torque.

50+ surgeries

Successfully used in 50+ surgeries across U.S. and Europe.

Published clinical studies

Recent published German studies confirm safety and effectiveness.

Experience the OrtoWell® difference at your spine clinic

You are among a selected group of U.S. spine surgeons invited to evaluate the OrtoWell® Distractor System.

If you'd like to explore how OrtoWell® could benefit your clinical practice, we'd be delighted to hear from you.

WHAT LEADING SURGEONS SAY

"OrtoWell® simplified the surgical procedure. The smooth hydraulic action supports accurate positioning and very strong holding strength."

Dr. Biren Desai, Head Spinal Surgeon, Cologne, Germany
