

Transforming a fundamental step in spine surgery

OrtoWell® is a patented hydraulic vertebral distraction system, privately owned by OrtoWay-US Inc, that gives spine surgeons smoother control, stronger holding power and a stable working space.

THE CHALLENGE

Spine surgeons still rely largely on manual distraction tools for a critical stage of surgery – separating vertebrae to create access, visibility and working space.

THE SOLUTION

OrtoWell® replaces manual force with controlled hydraulic movement, helping surgeons distract smoothly and hold the position firmly throughout the procedure.

Investment at a glance

FDA

FDA cleared for sale in the U.S.

50+

Procedures in U.S. and Europe; Published clinical study in Germany showing safety and efficacy

Patents

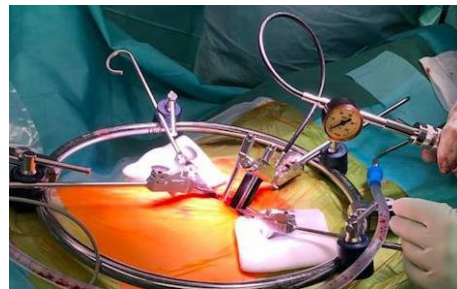

U.S. patent granted; MIS patent pending

\$800

Estimated recurring revenue per procedure

World's first hydraulically powered distractor.

The OrtoWell® distractor in use for spine surgery.

US commercialization opportunity

A large spine-procedure market, a differentiated product platform and recurring revenue after every procedure.

242,000+

annual U.S. procedures across target indications

Seeking investment to accelerate U.S. sales, distribution, clinical expansion and product development

WHAT LEADING SURGEONS SAY

"OrtoWell® simplified the surgical procedure. The smooth hydraulic action supports accurate positioning and very strong holding strength."

Dr. Biren Desai, Head Spinal Surgeon, Cologne, Germany
